

# CONTIGRA

*A High-Level XML-Based  
Approach to Interactive  
3D Components*

**Raimund Dachsel**  
Dresden University of Technology

- Motivation
  - (Web)3D User Interfaces:  
Current Situation & Future Vision
- The CONTIGRA Architecture
  - 3D Application Example
  - Component Development Levels & Tasks
  - CONTIGRA Markup Languages
- Conclusion & Future Work

## ■ Current Situation

- Improvements in 3D graphics hardware & fast-evolving Internet technologies
- Increase of Web-based 3D applications
- Problems:
  - Variety of proprietary Web3d-formats | X3D
  - Lack of design standards, authoring tools, no interdisciplinary development
  - Too much programming, time-consuming, few concepts of reuse

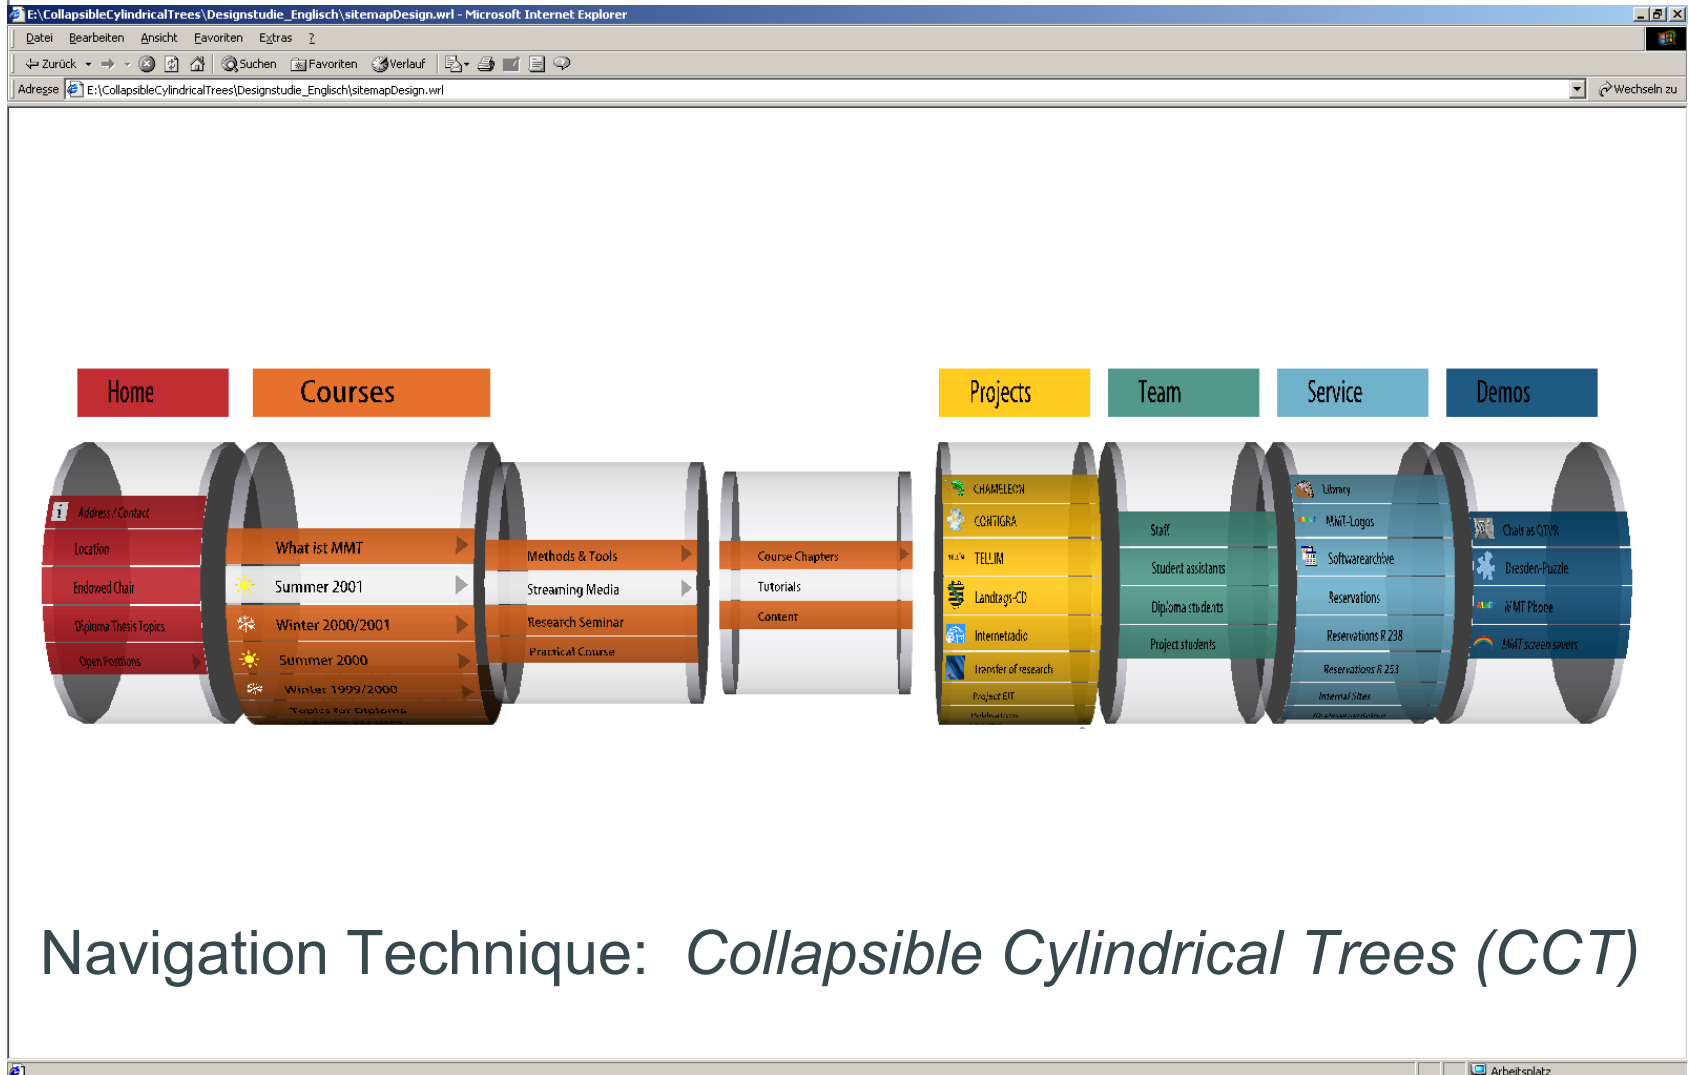

- Future Vision
  - Standards for three-dimensional user interfaces
  - Repertory of adaptable 3D Widgets, Metaphors
  - Reuse of 3D building blocks (components)
    - Less or no coding, high-level approach
    - Graphical tools, interdisciplinary development
- Existing Approaches
  - Bamboo, i4D, 3D Beans, ...
  - 3D format dependency & code-centered

## *Component OriENted Three-dimensional Interactive GRaphical Applications*

### ■ Characteristics

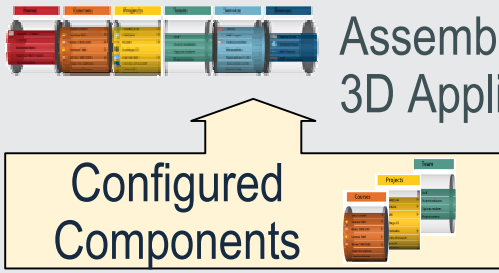

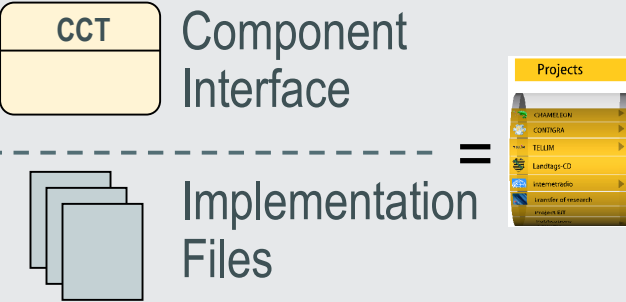

- Document-centered 3D component architecture
- Documents describing component interfaces, implementation, configuration, and assembly
- Declarative approach based on XML languages
- High-level view, hides scene graph details
- Abstraction to existing 3D toolkits, formats, APIs

# 3D Application Example

Navigation Technique: *Collapsible Cylindrical Trees (CCT)*

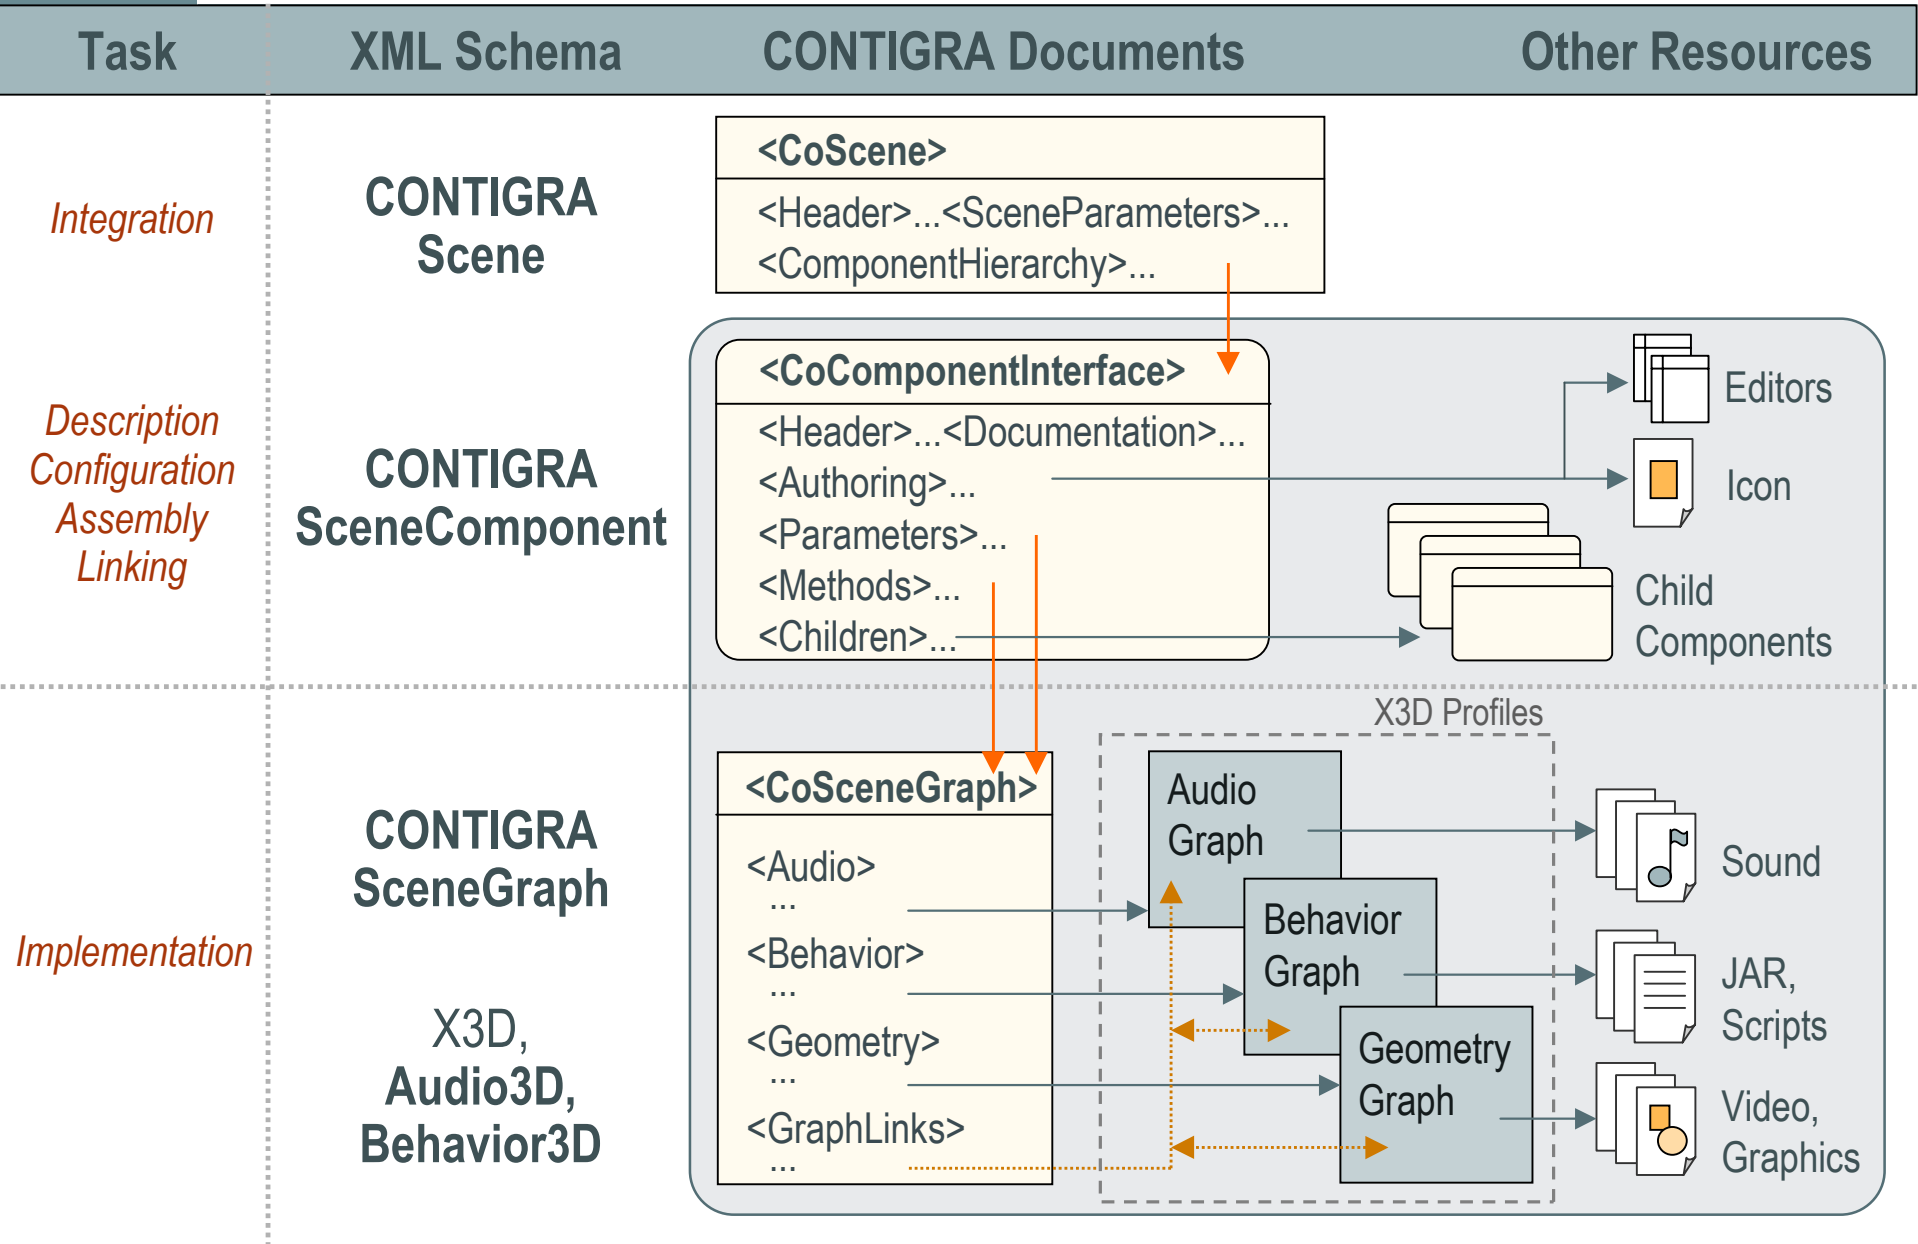

# Component Levels & Tasks

Level	Tasks <i>Component-</i>	Result (Documents)	Tools
Runtime	<i>Usage Adaptation</i>	 <p>Executable 3D Application</p>	3D Viewer (e.g. X3D Applet)
Configuration & Assembly	<i>Connection Assembly Configuration</i>	 <p>Assembled 3D Application</p>	<b>CONTIGRA SceneBuilder</b> (3D UIB)
Distribution	<i>Search Selection</i>	<p>Packaged 3D-Components</p> 	Component Database, Web Interface
Development	<i>Description</i> ----- <i>Implementation</i>	 <p>Component Interface</p> <p>Implementation Files</p>	<b>CONTIGRA ComponentBuilder,</b> XML-, Media & Programming Tools

- Basis: markup languages (XML Schema)
  - CONTIGRA SceneGraph
    - Component implementation language
    - Integrates various scene graph & media files
  - CONTIGRA SceneComponent
    - Component description & configuration language
    - Prototype concept
  - CONTIGRA Scene
    - High-level component integration language
    - Dependence on specific 3D Web environment

# CONTIGRA Levels

- CONTIGRA features
  - Componentization (design | deployment)
  - Reuse and platform independence
  - Abstraction to specific 3D formats
  - Declarative approach, well suited for tool support
- Future Work
  - Further improvements of Contigra schemas
  - Development of runtime-framework (translators) & 3D User Interface Builder
